IRP

Building a modern enterprise maintenance, asset and inventory management solution for UBC

The Enterprise Maintenance Management System (EMMS) will deliver a single unified platform called Planon and best practice processes for maintenance maintenance, inventory management and asset (building and grounds assets associated with maintenance) management to achieve UBC's strategic goals. EMMS is a multi-year initiative which started in 2018 and ongoing through 2020. EMMS timelines are aligned with the Workday implementation schedule in April 2020.
