

## FLEET MANAGEMENT

**What is Fleet Management?** Fleet Management is part of Asset Management with the focus on managing an organization's vehicles. It helps keep track of contracts, services and maintenance costs of vehicles like insurance, depreciation or write-offs, usage, fuel consumption, tax issues, damage and durability. Fleet Management helps to get an overview of your current fleet by reviewing history and gain insight into the future.

**UBC Fleet in Planon:** The scope of Fleet Management includes:

- Fleet
- Fuel management
- Maintenance schedules
- Fleet inspections

Note: The list above is representative only. Confirmation on what's in scope will be determined in Fall 2019.

**Integrations:** Planon will be integrated with Workday and potentially other UBC enterprise applications. During the project, a determination will be made on the system of record for each business process and communicated to users of each system.
