

## PLANON FACT SHEET

With more than 35 years of experience, Planon is the leading global provider of innovative real estate and facility management software, proven best practices and professional services that support building owners, occupiers, and service providers.

All of Planon's solutions enable organizations to manage smarter buildings and campuses and improve workplace performance by simplifying business processes and reducing costs. Planon has over 2,500 customers in 40 countries, offices in Canada, United States, United Kingdom, Asia and Europe.

Planon's Cloud Service is based on a continuous service delivery model. A significant change from UBC's current environment is that Planon delivers monthly upgrades to ensure UBC will always have the latest Planon Universe upgrades, including new functions and features, bug fixes, and the latest security updates.

This means UBC will receive continuous updates throughout the year and as such from a user perspective, users may notice subtle or more significant changes depending on the software release. Planon users will be notified, and training provided if required, of any significant changes to functionality which may adjust the way transactions are completed.
