

## EMMS TALKING POINTS ~ SEPTEMBER 2019

### Planon will be implemented in 2020.

Planon will replace PeopleSoft functionality for maintenance, inventory and asset management. UBC has the opportunity to simplify processes by adopting Planon best practice processes used by other higher education institutions.

### Planon will introduce mobile applications (apps)

Planon's Mobile Apps will enable staff to access and update information both in the field and stores locations.

- Trades staff will use Planon's Field Services Mobile App (PFSM) to accept and complete work orders and access/update asset information
- Stores staff will use Planon's Warehouse app for stock management to receive, issue, and return products

### Planon will be integrated with other UBC Applications

One of the benefits of enterprise applications like Planon and Workday is the ability to integrate to send data back and forth between applications, to provide a higher level of confidence in data accuracy.

- Planon will be integrated with Workday for HR and Finance data
- Planon will be integrated with other applications including Archibus and ArcGIS to for space and location data
- UBC IT will create additional technical services to enable data to be shared across applications
